Work Experience

- Rocket Factory Augsburg**, Operational Software Development Intern Mar 2026 – Jun 2026
- Designed and implemented a full data processing workflow for a rocket motor sensor calibration device, from data extraction and parsing to database integration and graphical presentation.
 - Resolved bugs and implemented feature requests from internal users across all major internal applications.
 - Maintained and streamlined Docker images for deployment and development environments.

Education

- MS Sapienza University of Rome**, Master's Degree in Computer Science Sept 2024 – Present
- Average: 27.8/30
 - **Coursework:** Cybersecurity, Data Science, Computer Systems (in English)
- BS Sapienza University of Rome**, Bachelor's Degree in Computer Engineering Sept 2021 – Dec 2024
- Thesis: Current Monitoring System with Arduino and Hall Effect Sensor [🔗](#)
 - **Coursework:** Engineering, Computer Science (in Italian)

Projects

- AWS Blog App Deployment and Testing** report [🔗](#)
- Designed and deployed a scalable, fault-tolerant, three-tier blog platform on AWS. Tested the platform with JMeter.
- Automated Detection of Security-Sensitive UI Elements** report [🔗](#)
- Designed a three-stage pipeline using UI-CTX and Graph Neural Networks to automatically identify and tag security-sensitive UI widgets for Clickshield.
- Keystroke Dynamics Recognition** report [🔗](#)
- Created a comparative study of three statistical keystroke-dynamics authentication models. Evaluated their performance with FAR, FRR, EER and visualized the results via ROC curves.

Technical skills

Languages: Python, C, Bash, HTML/JS/CSS, Typescript, Flask

Data Management: SQL, PostgreSQL

Platforms: Git, Linux, Docker, OPNSense, AWS

Support Tools: JMeter, Makefile, IDA disassembler

Open Source Contributions

glance-community-widgets [🔗](#): Implemented and published two widgets that interface with external APIs.

Languages

Italian: Native

English: Cambridge C2
